

Preview your Advisor

The subview **preview** gives you the opportunity to see your current working status of your advisor client without needing to deploy it (see [publish view](#)).

Structure

Next to the rendered client, you have the ability to switch some settings. These are:

- **Screen Width:**
You can scale the advisor depending on your display size of your desktop or mobile device; or select **Mobile** to see the mobile view or **Desktop** to get the desktop version of the client.
Thanks to this ComboBox you can easily switch between all variants your customers can possibly see while using your advisor.
- **Language:**
All languages which were added in the [internationalization view](#) can be selected. Thus, it is easy to see if all language texts are complete or look good in the advisor.
- **Theme:**
You can select all excentos provided themes to see which themes look best for your needs.
