

SFTP Configuration

In case that your data file is accessible via SFTP select the connector type "SFTP". Selecting this option provides you the exact same three buttons like the [HTTP Configuration](#) type. The "Update" and "Schedule" button are working like the buttons for the HTTP feed. Only the "Configure" button displays a different modal window.

Connector Type: SFTP ⌵ ⚙️ Configure 📄 Update 📅 Schedule ℹ️

Table of Contents:

- [Configure SFTP Download Settings](#)
- [Update the Data Feed](#)
- [Enable Scheduling](#)

Configure SFTP Download Settings

Unlike in the [HTTP Configuration](#) settings you have to enter your SFTP host name, port number and filename to get your product data feed.

Furthermore you can also provide authentication information to your server. You have to enter the username and the password.

Configure SFTP Download Settings

Update the Data Feed

After configuring the data feed settings you can update the product data in the Workbench by clicking the "Update" button. Then you are prompted for the import settings and can connect the attributes. Additionally the importer will inform you about new or missing columns and also illegal values will be flagged.

Enable Scheduling

After clicking on the "Schedule" button a modal window appears in which you can enable a download schedule for you product data. That means that you can define a daily time or custom cron job which gets the current state of the product data from the feed. This secures that the published Product Guide always has the current data.

The schedule only updates the data for the live Product Guide instance. To get these data into the Workbench you have to click on the "**Update**" button as well.

The image shows a modal window titled "Configure Download Schedule" with a close button (X) in the top right corner. The window contains the following elements:

- A checked checkbox labeled "Schedule is active".
- A horizontal separator line.
- A checked checkbox labeled "Daily".
- A "Time:" label followed by a text input field containing "00:00".
- An unchecked checkbox labeled "Custom (Cron)".
- A "Cron Statement:" label followed by a text input field containing "0 0 0 * * ?".
- At the bottom, there are two buttons: "Cancel" and "Confirm".

Cron Jobs use the Quartz Scheduler cron syntax which is different from the UNIX cron command. Please refer to this [page](#) for more information.
